Mr. Gupta,

As per our phone conversations today, I'm waiting for confirmation of PET/CT tests booking for tomorrow morning - kindly please get back to me ASAP so I'll know what time tests are scheduled for tomorrow. Below is email message sent earlier today, after which we spoke again on the phone.

Kind regards,
M. Siemaszko

Dear Anuj,

As a follow up to our phone call today --

1. CT tests appointments

In addition to PET/MRI tests, I definitely need to do the CT tests as well.

Referrals I provided do list 2 CT tests, i.e.:

a) Simultaneous multislice three-dimensional (3D) SPECT/CT scan with tracer and radio-opaque marker placed on scar area for evaluation of neurological symptoms on left side of the body from left iliac crest to left patella and neurogenic bladder

b) Simultaneous multislice three-dimensional (3D) SPECT/CT scan with tracer and radio-opaque marker placed on scar area for evaluation of urological symptoms including functional morphology of kidneys, bladder and ureters

Dr. Jena mentioned SPECT/CT might not be the best option for this, and he

suggested PET/CT is done instead. As long as CT data is also captured with a high-resolution multi-slice CT scanner, if your PET/CT device can do that, then this will be sufficient.

I see @ <https://delhi.apollohospitals.com/nuclear-medicine/treatment-services> it is mentioned the PET/CT device captures over a hundred slices - kindly please confirm whether it's at least 64 slices, preferably 128-256 slices, and please arrange for these tests as soon as possible, so consultations to be arranged can look into complete data (i.e. both PET/MRI and PET/CT).

2. Consultations appointments

You mentioned these could be arranged tomorrow - but since we're still missing PET/CT tests, these tests would need to be done first, then consultations.

Neurologist, urologist and plastic surgeon consultations are needed to fully assess this condition. Also, since additional tests might be necessary (I have referrals for electrophysiological tests, urodynamic tests, etc - if needed), and my time is limited, it's important the PET/CT tests can be arranged as soon as possible, and consultations right after PET/CT test results are ready.

3. Skin USG, videodermatoscopy

Since scar tissue area might not be visible well enough on PET/MRI, is skin USG and videodermatoscopy also available at your facility?

Thank you for your help.

Regards,

--

Dear Anuj,

I do not know why the payment has not come through - when I booked the tests, I received confirmation, which I sent to you shortly afterwards.

Please invoice me and I will pay on Monday, i.e. for:

- 1) whole body PET/MRI with FDG,
- 2) focused PET/MRI studies (please consult Dr. Jena for more details on these)
 - a) PET/MRI Neurography of pelvis/abdomen/uro-genital area with contrast
 - b) PET/MRI Urography
 - c) PET/MRI soft tissue assessment in area where scarred skin lesions can be seen (i.e. left side of the body, around pelvis area)
 - d) PET/MRI genital blood flow assessment

Radio-opaque skin markers will be provided by me, as mentioned during meeting with Dr. Jena and summary email I sent after our meeting.

Hopefully we can meet on Monday and you can guide me regarding bookings for SPECT/CT tests as well as consultations.

Thank you for your help.

Regards,
