FOCUSED ULTRASOUND LEFT LATERAL ABDOMINAL WALL

Ultrasound was done using a linear probe with special 2D enhancement features including compound and speckle reduction imaging (SRI).

Clinical profile: Old ulcer in the left lateral abdominal wall.

There is a focal 1.0 x 0.2 cm sized area of skin thickening in the left lateral abdominal wall without deep extension or abnormal vascularity.

No focal solid or cystic mass lesion is seen.

Please correlate clinically.
